

## Guinea produce paneles solares

---

Will Guinea build a solar power plant in ?The solar projects would bring 180 megawatts of new capacity online in a country with a total installed generating capacity of just 1,200 megawatts in .

(Bloomberg) -- Guinea plans to build the country's first solar power plants to increase its electricity production by 15% and cut its reliance on West African neighbors.

Does Guinea need a solar power plant?Guinea imports about 130 megawatts of power from neighboring Senegal and Ivory Coast, but that's insufficient to meet demand.

"The solar power plants will support sustainable development and strengthen our energy autonomy," the ministry said, without specifying the project's cost or source of funding.

How many people will 84 MW solar power supply in Guinea?Translated into household equivalents, the 84 MW project could supply more than 360,000 families.

The solar plants will contribute substantially to Guinea's overall goal of producing 30% of its energy from renewable sources by , a key part of the country's commitment to the Paris Agreement.

Can Guinea become a solar era?The facilities will also create skilled jobs for engineers, managers and maintenance technicians in Kankan and Siguiri, while powering economic development throughout the communities.

Backed up by a sound financial model, this ambitious project is well placed to reach financial close and take Guinea into its solar era.

How will a new energy plant benefit Guinea?The two plants will make Guinea's energy system stronger, greener and more reliable, bringing an extremely affordable new energy source into a historically fossil-fuel-dominated (and expensively subsidised) market.

What projects are being built in Sierra Leone?Projects.

MOU signed.

- Sierra Leone Ministry of Energy for building Distribution Lines of 66 and 33 KV across the country, 200 MW hydropower projects and several Solar projects, MOU signed Dec.
